Turnkey Municipal Fleet Management Solution Deployed with TagMaster NA Software & Hardware   Press Release

Tacoma, WA | July 2023 -- TagMaster North America, Inc. (TMNA), a leader for AVI (Automated Vehicle Identification) with over 25 years of experience and technical knowledge, announces the successful implementation of the powerful ACTS Advanced Management Software in conjunction with NDAA compliant Microwave 2.45GHz Long-Range RFID readers with 2.45GHz tags. Partnering with Automated Gates & Equipment and Secure A Site; a comprehensive access control solution was provided for the Local Water and Sewer district in South King County Washington.

Automated Gates & Equipment included TMNA early in their design process for a collaborative approach to ensure the highest performance comprehensive vehicle tracking and access control solution on the market. AG&E offered a variety of services for the project from detailed shop drawings with critical measurements, to formed and poured concrete footings for the gate operators, keypad and the TMNA Automated Vehicle Identification Solution. Secure A Site installed the high-security gates and fencing for the project. With the wide scope of capabilities and their knowledgeable team, the installation planning process was smooth, providing an extremely successful result. TMNA's turnkey access control solution was easy to use, learn and provides the users for the water and sewer district with crucial data and information they need to optimize and streamline their operations.

The TMNA LR Series RFID equipment offers a solution impervious to electromagnetic interference and programmable frequency hopping to ensure optimized performance in any environment. Tag options include the S1255 MarkTag Classic which can be placed on the windshield or in a HangTag Holder, as well as the exterior-mounted S1355 Ruggedized Outdoor tag. This project is part of the development of their new Headquarters building and a quintessential part of automating vehicle access and facility oversight.

The ACTS Advanced Software Solution offered by TMNA deployed and implemented by Automated Gates & Equipment addresses a wide range of challenges for commercial and municipal vehicles in a demanding environment. The LR-6 PRO Microwave readers and tags deployed for this project in conjunction with the powerful and feature-rich ACTS Advanced software offers the district features such as organizing vehicles and credentials by group, area, device, company and the ability to provide customized gate scheduling and reporting to track and manage access for their vehicle fleet into and out of the district facility and collect valuable information to help them make data driven decisions for now and the future.

TMNA, Automated Gates & Equipment and Secure A Site continue to earn their positions as industry leaders in Washington State by leveraging innovative products, high quality materials, knowledgeable installers making a highly adaptable solution team capable of responding to the ever evolving and changing market demands and offer unique and tailored solutions for municipal and government fleet management. Through this solution, the municipality and Water and Sewer district can more easily focus on doing what they do best, the continued delivery of safe, reliable and high-quality drinking water and responsible sewer service to their communities.

Automated Gates & Equipment offer the best in custom gates including driveway, entrance, fencing, access control systems and gate services for residential and commercial sectors.
