

Access Control Tracking System (ACTS) Advanced

RFID Solution Software

KEY FEATURES:

- Data Integration Support
- Zoning: Unlimited Regions within Areas
- Customizable/Downloadable Reports
- Manage Multiple Readers from a Single UI
- Reversible Lane Support
- Soft, Hard, and Timed Anti-Passback
- Tiered User Permissions
- Mass Credential Importing/Exporting
- Multiple Camera Feed Streams

ACTS Advanced software, powered by ©ArmID, is the **premier access control tracking software solution** for TagMaster North America's RFID platform. This in-house developed program offers enhanced features such as zoning, multiple reader support, a new-and-improved web interface, sync-enabled whitelisting, streamlined groups and access profiles, multiple anti-passback settings, and custom reporting to suit the unique specifications of each application. ACTS Advanced is the perfect solution for everything from Gated Communities to Ground Transportation Management Systems to University Parking.

Increased Security

Combined with networked TagMaster RFID Readers, ACTS Advanced ensures that RFID Tags are read only once and cannot be passed back to unauthorized users attempting access. Settings include Hard, Soft, and Timed Anti-Passback, with the ability to Neutralize Anti-Passback to ensure correct credential status. Integration with inductive loop vehicle detectors ensures secure lane control.

Zoning Support

ACTS Advanced allows the user to define regions within multiple areas. Areas can be "nested" within other areas for enhanced oversight and control. Advanced also offers multiple Reader management from within one user interface.

Customizable Schedules & Reports

The all-new web interface allows for easy facility access scheduling. Users may set multiple schedules for each credential or group, and customizable reports include Access Events, Analytics, Credentials, Trips and Dwells, and Location.

Whitelist

ACTS Advanced supports Whitelist syncing with the system's Readers, ensuring that even in the case of disconnection a Reader can still process certain credentials.

Robust Access Control

The new software supports unique access profiles for groups and individual credentials, and allows multiple access schedules. This enables administrators to define precisely where and when individual users or groups may gain access. This feature is particularly useful for VIP/express lane implementation, or for users that demand a greater measure of security.
