Community Regional Medical Center Deploys TagMaster North America RFID System for Faculty and Staff Parking Access Controls

A reliable and effective AVI solution for Parking Access Control.

TACOMA, WA | February 06, 2017 – TagMaster North America, Inc., the leading provider of long-range, high-performance Radio Frequency Identification (RFID) systems for Automatic Vehicle Identification (AVI) deployed its long range RFID solutions for faculty and staff parking access for Community Regional Medical Center (CRMC) in Fresno, California. The forward thinking team at CRMC wanted to ensure the most accurate and reliable RFID technology was being used to allow immediate and secure access for parking controls.

CRMC chose TagMaster RFID systems to provide their parking garages and lots a comprehensive, site-wide standardized solution for their doctors, nurses and staff to allow secure and continuous parking access. The need for consistent and reliable performance was paramount for their parking operations. A previous RFID system had been installed and due to the poor performance, faculty, administrators and staff were not able to reliably gain access to their assigned lots without the need for manual override for the barrier arms. This proved to cause significant traffic congestion and delayed employees from reporting to their assigned duty positions to care for patients in a reasonable time. After tolerating a poor quality and poor performing system for years, administration no longer could accept such conditions and selected a TagMaster solution.

TagMaster installed its' robust LR-3 RFID Readers in conjunction with the S1240 MarkTag MeM Tags to allow for quick, hands-free vehicle access for hospital personnel and other authorized medical staff at CRMC. The Long-Range LR-3 Readers identify a vehicle's TagMaster AVI Tag at a distance of up to 18 feet as it approaches the entrance of the parking garage, logs the authorized credential and triggers the barrier arm to open for valid tags while denying access to anyone not permitted access.

"We are honored to be part of the parking solution at CRMC", Ali Khaksar, President of TagMaster North America Inc, noted; "TagMaster RFID systems make parking experiences positive and increases employee satisfaction."

TagMaster North America, Inc advanced RFID solutions are well regarded for their exceptional build quality, ease of installation and consistent performance. CRMC employees are no longer concerned regarding their ability to safely and securely gain access to the parking garages and instead can focus on the care of their patients. Security is highly maintained after shifts at night as there is no need to stop, roll down the window and enter a code or present a proximity card. The TagMaster solution is completely hands-free while offering security and convenience. Employee morale, health and wellbeing have been greatly improved.

Community Regional Medical Center (CRMC) Located in downtown Fresno, Community Regional Medical Center is the flagship hospital of Community Medical Centers. Accredited and recognized for quality care by The Joint Commission, Community Regional is home to central California's highest level of care with a capacity of 685 licensed beds.

The hospital's full-service 58,000-square-foot Emergency Department is the region's only Level 1 (highest level) trauma and comprehensive burn center. Community Regional is affiliation with the University of California San Francisco Medical School – one of the top medical schools in the nation – and provides patients access to some of the brightest and most forward-thinking medical specialists in the country.
