

Alberta Health Services Deploys TagMaster North America RFID for Emergency Medical Services *A mission critical performance solution for critical service missions.*

TACOMA, WA | November 30, 2016 – TagMaster North America, Inc., the leading provider of long-range, high-performance Radio Frequency Identification (RFID) systems for Automatic Vehicle Identification (AVI) deployed its embedded standalone access control solution for the Emergency Medical Services (EMS) vehicle dispatch center at Alberta Health Services in Canada.

TagMaster RFID systems will provide the EMS stations with a comprehensive, site-wide standardized solution for their ambulance bay dispatch centers. By simplifying ambulance access with features from TagMaster such as customized reports and ingress tracking, an increase in security and operational efficiency for these vital EMS dispatch centers became possible without having to install a scale-invariant third party access control panel.

TagMaster installed its robust LR-Series RFID Readers with embedded ACTS Essential software in conjunction with the S1255 MarkTag Classic Tags to allow for quick, hands-free vehicle access for EMS personnel and other authorized medical agency staff at Alberta Health Services. The Long-Range LR-Readers identify a vehicle's TagMaster AVI Tag at a distance of up to 18 feet as it approaches the entrance of the dispatch station, logs the authorized credential and triggers the roll up door to open for valid tags while denying access to anyone not permitted access.

“The implementation of ACTS Essential software allows us to save valuable time for a wider market of users in need of an innovative and cost effective solution for mission critical operations.” – *Ali Khaksar, President and CEO of TagMaster North America, Inc.*

Tag Master’s advanced RFID ACTS software is a Reader-embedded system offering enhanced features such as: customized associated credentials, real-time IP camera support, tailored and customizable reports, time stamping, gate/holiday scheduling and port forwarding all within a user-friendly, standard web-based interface.

TagMaster North America, Inc. is the leading provider of long-range, high-performance Radio Frequency Identification (RFID) solutions for Automated Vehicle Identification (AVI) and rail bound transportation. Convenient and efficient RFID solutions from TagMaster NA can increase security and decrease environmental impact. Seamless integration and reliable performance records are TagMaster North America’s distinct hallmarks.
