

Long Range Vehicle Access Solution Deployed For Sterling Heights Municipal Facility

Mission critical performance for critical mission vehicle parking

Tacoma, WA | April 2018 – TagMaster North America, Inc., a leading provider of Identification Solutions in conjunction with International Controls and Equipment deployed the parking solution for law enforcement and emergency service vehicle access for the Sterling Heights Municipality in Michigan. The recently installed LR-Series Microwave RFID system and high speed barrier arms have provided the performance and extreme reliability required by the city.

Sterling Heights Municipality needed a secure parking solution for law enforcement and emergency service vehicles that would eliminate any risk of tailgating and unauthorized access. Prior to the installation of the TagMaster NA RFID system posted signage was the only form of security for the lot. Eliminating tail gating, restricting unauthorized access and increasing user convenience were priorities for this project. Many of the law enforcement and emergency vehicles have metallic/UV coated windshields; the TagMaster NA long range 2.45GHz RFID system ensures near 100% accuracy and is unaffected by this common RFID interference.

The solution put forward has streamlined overall operations and increased critical security for the facility. Throughput speeds have increased, effectively reducing traffic congestion and tailgating is effectively eliminated with the high speed barrier arms installed by International Controls and Equipment (ICE). Sterling Heights' municipal facility now has a secure, reliable and modern comprehensive access control solution. This solution has significantly improved the parking experience, optimized parking operations, and increased security for officers, EMS, and citizens of Sterling Heights.

International Controls & Equipment has proudly provided the Metro Detroit area with Gate Automation, Access Control and Security Solutions for over 40 years. ICE is passionate about working with customers to create innovative solutions that produce actual results. They utilize the latest technologies, coupled with extensive experience within the security industry to achieve effective product combinations that fit applications and budgets. From automatic gate operators, barrier gates, parking systems, card readers and intercoms, to electric door locks, surveillance cameras and digital recording – they will help secure and enhance your property.
