University of Washington, Seattle Chooses T2 and TagMaster North America Combination

Permit process and parking access control better managed through integrated IP-based solutions and stand-alone systems.

TACOMA, WA | November 2, 2016 – TagMaster North America, Inc., the leading provider of long-range, high-performance Radio Frequency Identification (RFID) systems for Automatic Vehicle Identification (AVI) established its embedded standalone access control solution now integrates directly with T2 System's permit management and enforcement and T2 Flex system. This integration enabled The University of Washington, Seattle to create a truly unified parking management platform.

T2 Systems, a parking solutions supplier, provided the University with T2 Flex, a comprehensive and campus-wide parking system that manages parking access, revenue control and permits, making parking management and enforcement a seamless operation.

Over Forty TagMaster long-range UHF XT-3 Readers were integrated into T2's cohesive solution, ultimately allowing for quick, hands-free vehicle access for students, faculty and staff at the controlled parking areas on UW's campus. The long-range RFID Reader identifies a vehicle's TagMaster AVI Tag as it approaches an entrance/exit gate and T2 Flex verifies the identity, triggering a gate to open for valid tags and denying access to anyone not permitted access in the specific parking area. TagMaster North America was able to add features onto the XT-3 Readers such as *tag filtering*, where the Readers are able to correctly and reliably distinguish between multiple tags in an area without disrupting the processing time, and *TCP/IP,* where the communications protocol can be used in the universities private network.

 "This innovative combination along with T2 System's market leading technology offers the unique opportunity for organizations like universities to utilize available parking more efficiently and enhance their level of customer service while increasing their parking revenue. It was a pleasure working with an organization so close to home such as UW and successfully providing them with a combined solution that works from T2 Systems!" – *Ali Khaksar, President, TagMaster North America*

T2 Systems, Inc. Founded in 1994, T2 Systems is a technology-focused parking systems provider with deep roots in the evolving parking industry. This commitment is evident in T2's quality products and services, thought leadership and strong customer relationships. The company's unified parking management and payment solutions provided under the T2 and Digital brands are in use by over 1,000 organizations across the US and Canada including universities, cities, towns, hospitals and parking operators. T2 has offices in Indianapolis, Vancouver and virtual offices throughout North America. For additional information about T2 products and services, visit www.T2systems.com.

TagMaster North America, Inc. is the leading provider of long-range, high-performance Radio Frequency Identification (RFID) solutions for Automated Vehicle Identification (AVI) and rail bound transportation. Convenient and efficient RFID solutions from TagMaster NA can increase security and decrease environmental impact. Seamless integration and reliable performance records are TagMaster North America's distinct hallmarks.
